

QWEN.md “ Qwen Code context for this module

INHERITED FROM the Helix Constitution

This module is governed by the Helix Constitution. All rules in the constitution’s QWEN . md and the Const it u t i o n . md it references apply unconditionally. Locate the constitution from any nested depth via its `find_constitution.sh` helper “ do NOT hardcode a path (this module stays fully decoupled and project-agnostic per §11.4.28).

Canonical reference: <https://github.com/HelixDevelopment/HelixConstitution>

Read CLAUDE.md “ it is mandatory

This module’s canonical agent-instruction file is CLAUDE . md in this directory. Before doing any work in this module, open and read CLAUDE . md and this module’s CONSTITUTION . md in full. Every rule there binds Qwen Code exactly as it binds Claude Code.

This file is a plain-text pointer and deliberately uses no auto-import directive. Qwen Code’s memory-import processor resolves import-prefixed tokens recursively, and the instruction files reference tokens that are not files. To stay compatible with Qwen Code this file contains no such tokens “ read CLAUDE . md directly.
