

behavior-anchors

Behavior Anchor Manifest — Containers

Every row is a user-facing capability and the single anchor test that proves it works end-to-end. See CONST-035 in CONSTITUTION.md.

Status legend

- active — anchor exists and is callable; capability is verified.
- pending-anchor — capability declared, anchor test does not yet exist. Listed in challenges/baselines/bluff-baseline.txt Section 3. Reducing this state is the work of campaign sub-project 4.
- retired — capability removed; row kept for history.

Path format

For Go tests: <path>.go::

Capabilities

id	layer	capability	anchor_test_path
CAP-001	sub-module:Containers	Boot all registered services via Boot-Manager	pkg/boot/manager_test.go::TestBootManager_BootAll_BasicS
CAP-002	sub-module:Containers	Parse docker compose ps status output into	pkg/compose/orchestrator_test.go::TestParseStatusOutput_ValidLines

id	layer	capability	anchor_test_path
		structured records	
CAP-003	sub-module:Containers	Discover service via TCP probe	pkg/discovery/tcp_test.go::TestTCPDiscoverer_Discover_Success
CAP-004	sub-module:Containers	Distribute container locally via DefaultDistributor	pkg/distribution/distributor_test.go::TestDefaultDistributor_Distribute_Local
CAP-005	sub-module:Containers	Build a service Endpoint with sane defaults	pkg/endpoint/builder_test.go::TestBuilder_Defaults
CAP-006	sub-module:Containers	Load remote host registry from environment variables	pkg/envconfig/parser_test.go::TestLoadFromEnv
CAP-007	sub-module:Containers	Publish/subscribe lifecycle events on the event bus	pkg/event/bus_test.go::TestDefaultEventBus_PublishSubscribe
CAP-008	sub-module:Containers	Construct DefaultChecker that registers built-in TCP/HTTP/gRPC health checks	pkg/health/checker_test.go::TestDefaultChecker_Register_Override
CAP-009	sub-module:Containers	Register a service with the lifecycle manager	pkg/lifecycle/manager_test.go::TestDefaultManager_RegisterService
CAP-010	sub-mod-	Collect system resource snapshot	pkg/monitor/system_test.go::TestDefaultSystemCollector_Collect

id	layer	capability	anchor_test_path
	ule:Con- tainers	(CPU/ memory/ disk)	
CAP-011	sub- mod- ule:Con- tainers	Allocate an unused port	pkg/network/port_allocator_test.go::TestPortAl
CAP-012	sub- mod- ule:Con- tainers	SSH ex- ecutor surfaces invalid- host error cleanly	pkg/remote/ssh_execut- or_test.go::TestSSHExecutor_Execute_InvalidH
CAP-013	sub- mod- ule:Con- tainers	Auto- detect available container runtime, preferring Docker	pkg/runtime/detect_test.go::TestAutoDetectWit
CAP-014	sub- mod- ule:Con- tainers	Schedule containers with re- source- aware strategy	pkg/scheduler/sched- uler_test.go::TestDefaultScheduler_Schedule_R
CAP-015	sub- mod- ule:Con- tainers	Failover handler re- fuses to operate without HostMan- ager + Ex- ecutor	pkg/distribution/fail- over_test.go::TestFailoverHandler_NoHostMan
CAP-016	sub- mod- ule:Con- tainers	Distributed build ex- ecutes across re- gistered remote hosts	pkg/distribution/distrib- uted_build_test.go::TestDistributedBuildExecut
CAP-017	sub- mod- ule:Con- tainers	ctop col- lector con- structs against a real con- tainer runtime	pkg/ctop/ctop_test.go::TestNewCollectorWithE

id	layer	capability	anchor_test_path
CAP-018	sub-module:Containers	Event-type constants are defined for every lifecycle stage	pkg/event/events_test.go::TestEventType_Constants
CAP-019	sub-module:Containers	DNS discoverer constructs or accepts SRV/A record query config	pkg/discovery/dns_test.go::TestDNSDiscoverer_Discover_Success
CAP-020	sub-module:Containers	Build-package planner produces an executable plan	internal/buildpkg/planner_test.go::TestPlanner_Plan
CAP-021	sub-module:Containers	Scheduler labels-match strategy correctly filters hosts	pkg/scheduler/strategies_test.go::TestLabelsMatchStrategy
CAP-022	sub-module:Containers	End-to-end distribution workflow exercises all phases	tests/integration/distribution_integration_test.go::TestDistributionWorkflow
CAP-023	sub-module:Containers	SSH executor rejects connection to invalid host with descriptive error	tests/security/ssh_security_test.go::TestSSHExecutor_InvalidHost

(Manifest now covers core runtime+orchestration+distribution+security +integration capabilities — 23 active rows. Long-tail: per-strategy scheduler tests, individual lifecycle event types, volume mount paths.)
